

Oil & Gas

- our services to the offshore industry

We offer a full range of industrial, medical and speciality gases to the offshore industry

Offshore

Nippon Gases offer a full range of industrial, medical and specialty gases adapted to the specific requirements of our customers in the offshore industry.

We supply both gaseous and liquid gases in cylinders or in vacuum insulated tanks.

We follow through on our commitments and believe in true collaboration without customers.

Choosing Nippon Gases means working with a proven supplier with a high level of service.

Distribution

The Nippon Gases commitment to reliable supply and product availability, is further strengthened through our air separation unit in Rjukan, Norway and Perstorp, Sweden.

All our agents follow the Nippon Gases requirements in terms of storage and shipping of our offshore equipment. Our agents are also audited annually to ensure quality, competence and that procedures are followed.

Specialty gases

Our specialty gases are available in hundreds of ultra-pure qualities and custom specified mixtures. They are used in laboratory research and calibration of scientific and medical instrumentation.

Exact

The Exact cylinder tracking system allows you to transfer gas cylinders internally within the company, thus ensuring that costs are allocated to the appropriate department/project.

Through the use of a PDA (Personal Digital Assistant) the gas cylinder's barcode is scanned for easy, and effective registration at point of delivery and return of the cylinder. The information is then stored in your web portal.

Our offshore agents perform tracking on all our offshore equipment.

Full traceability

If you have gas cylinders at several different locations, our Exact cylinder tracking system is an excellent way of maintaining an overview, both economically and in terms of safety.

Cylinder tracking gives you an overview of where the cylinders are located – based on hazard classification. This enhances emergency preparedness in the event of an accident. Information concerning revision dates on gas cylinders is available in system reports.

All offshore racks are audited every 12 months.

Safety is in our DNA

Nippon Gases is committed to serve our customers in a safe and environmentally friendly way through our products and services.

Safety courses

We offer dedicated safety training, adapted to the individual company. These courses cover use, handling, transportation, storage of gas and product training.

In addition we offer an online gas safety course which provides essential and legally required knowledge of gas hazards and safety. The users can take the course at their own convenience.

Certifications

ISO 9001:2008
ISO 14001:2004 JSQ Achilles certified
Nippon Gases's production site for calibration gases at Rjukan has received ISO/IEC 17025:2005 accreditation certificate for preparation and analysis of natural gas mixtures.

This is a recognition of the work Nippon Gases has done for more than 20 years within the field of specialty gases.

Nippon Gases produce accredited natural gas mixtures which covers our customers' needs and their demand for an accredited supplier of calibration gases.
